FORM 6-K

**REPORT OF FOREIGN PRIVATE ISSUER
PURSUANT TO RULE 13a-16 OR 15d-16
UNDER THE SECURITIES EXCHANGE ACT OF 1934**

For the month of March 2017

Commission File Number 001-12284

GOLDEN STAR RESOURCES LTD.

(Translation of registrant's name into English)

150 King Street West
Suite 1200
Toronto, Ontario
M5H 1J9, Canada

(Address of principal executive office)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F.

Form 20-F Form 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1):

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7):

Indicate by check mark whether the registrant by furnishing the information contained in this Form is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934. Yes No

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): _____

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

Date: March 6, 2017

Chief Financial Officer

EXHIBIT INDEX

<u>Exhibit No.</u>	<u>Description of Exhibit</u>
99.1	Press Release dated March 6, 2017 - Golden Star Reports Remaining High Grade In-Fill Drilling Results from Wassa Underground Gold Mine

Golden Star Reports Remaining High Grade In-Fill Drilling Results from Wassa Underground Gold Mine

Results Include 30.2 Metres Grading 15.3 Grams Per Tonne of Gold

TORONTO, March 6, 2017 /CNW/ - Golden Star Resources Ltd. (NYSE MKT: GSS; TSX: GSC; GSE: GSR) ("Golden Star" or the "Company") is pleased to report the remaining results from the in-fill drilling program at its Wassa Underground Gold Mine ("Wassa Underground") in Ghana.

The program targeted the high grade B Shoot zone of Wassa Underground, focusing on the areas that are expected to be mined with transverse stoping (the "2016 B Shoot transverse stope drilling program").

HIGHLIGHTS:

- Assay results for the remaining 15 diamond drill ("DD") holes from the 2016 B Shoot transverse stope drilling program have been received
- Significant intercepts included:
 - 30.2 metres ("m") grading 15.3 grams per tonne ("g/t") of gold ("Au") from 270.0m in hole BS16DD013, including:
 - 4.6m grading 41.2g/t Au from 276.2m
 - 10.1m grading 21.8g/t Au from 286.2m
 - 24.5m grading 12.1g/t Au from 280.0m in hole BS16DD021, including:
 - 5.5m grading 30.0g/t Au from 300.0m
 - 25.2m grading 6.4g/t Au from 245.7m in hole BS16DD023, including:
 - 3.6m grading 10.5 g/t Au from 249.7m
 - 0.9m grading 65.5 g/t Au from 262.5m
- These results confirm the high grade nature and continuity of gold mineralization within the B Shoot transverse stoping areas
- Exploration strategy update is expected to be released later in the first quarter of 2017

Sam Coetzer, President and Chief Executive Officer of Golden Star, commented:

"This drilling program was designed to test the first B Shoot transverse stopes, which we expect to begin mining in the third quarter of this year. As well as confirming the high grade nature and continuity of the B Shoot, the results from the most Northern holes of this program suggest that the high grade zones continue up plunge to the North. As part of the design update work, which will be conducted with this new drilling data, we will assess the viability of adding additional stopes to the North of the current mine plan with the intention of increasing Wassa Underground's Mineral Reserves."

Drilling Results

During the second half of 2016 Golden Star conducted an in-fill drilling program to further delineate the first planned transverse stoping areas of the B Shoot zone. In December 2016, Golden Star reported the first nine holes of this program and the results of the remaining 15 holes have now been received. They continue to confirm the wide zones of high grade gold mineralization in this area. This program has also defined the contacts and geometry of the high grade zones so that detailed mining plans and schedules can be assembled in advance of mining.

In addition, the drilling targeted gaps in the existing planned stopes to determine whether continuity between areas of higher grade mineralization exists. The results of the most Northern holes from this program indicated that the ore body is open to the North and, therefore, Golden Star will be evaluating the viability of adding additional stopes to the mine plan in this area.

The full set of results is listed in Appendix A and includes several compelling intercepts, as set out below. A long section showing the location of the drill holes is available at: <http://www.gsr.com/operations/wassa/wassa-main/>

Significant intercepts from Wassa Underground

HOLE ID	Azimuth (°)	Dip (°)	From (m)	To (m)	Drilled Width (m)	True Width (m)	Grade (Au g/t)

Company Profile

Golden Star is an established gold mining company that owns and operates the Wassa and Prestea mines situated on the prolific Ashanti Gold Belt in Ghana, West Africa. Listed on the NYSE MKT, the TSX, and the GSE, Golden Star is strategically focused on increasing operating margins and cash flow through the development of its two high grade, low cost underground mines both in conjunction with existing open pit operations. The Wassa Underground Gold Mine commenced commercial production in January 2017 and the Prestea Underground Gold Mine is expected to achieve commercial production in mid-2017. Gold production in 2017 is expected to be 255,000-280,000 ounces with cash operating costs of \$780-860 per ounce.

Cautionary note regarding forward-looking information

Some statements contained in this news release are forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995 and other applicable securities laws. Such statements include; the timing for releasing the exploration strategy for 2017; the timing of the commencement of transverse stoping of the B Shoot; the impact of future B Shoot drilling programs on Wassa Underground planned stopes; the ability to increase Wassa Underground's Mineral Resources; the wide, high grade zones of gold mineralization at Wassa Underground; the viability of adding additional stopes to the mine plan; 2017 gold production and cash operating costs; and the ability to mine and access B Shoot zone grades and thicknesses by way of underground mining. Investors are cautioned that forward-looking statements are inherently uncertain and involve risks and uncertainties. Factors that could cause actual results to differ materially include timing of and unexpected events during exploration; variations in ore grade; variations in relative amounts of refractory, non-refractory and transition ores; technical or permitting issues; fluctuations in gold price and costs; availability of capital and/or external financing on acceptable terms; changes in U.S. and Canadian securities markets; and general economic conditions. There can be no assurance that future developments affecting the Company will be those anticipated by management. Please refer to the discussion of these risks and other factors in the Company's Annual Information Form for the year ended December 31, 2015 and other filings of the Company with the United States Securities and Exchange Commission and the applicable Canadian securities regulatory authorities. The forecasts contained in this press release constitute management's current estimates, as of the date of this press release, with respect to the matters covered thereby. We expect that these estimates will change as new information is received. While we may elect to update these estimates at any time, we do not undertake to update any estimate at any particular time or in response to any particular event.

Technical Information

The technical contents of this press release have been reviewed and approved by S. Mitchel Wasel, BSc Geology, a Qualified Person pursuant to National Instrument 43-101. Mr. Wasel is Vice President of Exploration for Golden Star and an active member and Registered Chartered Professional of the Australasian Institute of Mining and Metallurgy.

The results for Wassa Underground stated herein are based on the analysis of saw-split HQ/NQ diamond half core or a three kilogram single stage riffle split of a nominal 25 to 30 kg Reverse Circulation chip sample which has been sampled over nominal one meter intervals (adjusted where necessary for mineralized structures). Sample preparation and analyses have been carried out at SGS Laboratories in Tarkwa using a 1,000 gram slurry of sample and tap water which is prepared and subjected to an accelerated cyanide leach (LEACHWELL). The sample is then rolled for twelve hours before being allowed to settle. An aliquot of solution is then taken, gold extracted into Di-iso Butyl Keytone (DiBK), and determined by flame Atomic Absorption Spectrophotometry (AAS). Detection Limit is 0.01 ppm.

All analytical work is subject to a systematic and rigorous Quality Assurance-Quality Control (QA-QC). At least 5% of samples are certified standards and the accuracy of the analysis is confirmed to be acceptable from comparison of the recommended and actual "standards" results. The remaining half core is stored on site for future inspection and detailed logging, to provide valuable information on mineralogy, structure, alteration patterns and the controls on gold mineralization.
