Assumptions

For the purposes of preparing the above chart, the following assumptions, among others, have been made: (a) in relation to the initial forecast, the forecast error stays constant over the life of the SAC bonds and is equal to an overestimate of electricity consumption of 5% (1.35 standard deviations from mean) or 15% (4.64 standard deviations from mean); (b) the servicer makes timely and accurate filings to make a true-up adjustment to the SAC charges at least annually; (c) customer write-off rates are held constant at 0.30%; (d) customers remit all SAC charges 29 days after such charges are billed; (e) ongoing financing costs are equal to projections; (f) a permanent loss of all customers has not occurred; (g) there is no acceleration of the final maturity date of the SAC bonds; and (h) the issuance date of the SAC bonds is May 27, 2026. There can be no assurance that the weighted average life of the SAC bonds will be as shown.
