UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

Report of Foreign Private Issuer

**Pursuant to Rule 13a-16 or 15d-16
of the Securities Exchange Act of 1934**

Date: February 23, 2005
Commission File Number 001-31528

IAMGold Corporation

(Translation of registrant's name into English)

**220 Bay Street, 5th Floor
Toronto, Ontario M5J 2W4, Canada
Tel: (416) 360-4710**

(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports under cover Form 20-F or Form 40-F.

Form 20-F Form 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1): ____

Note: Regulation S-T Rule 101(b)(1) only permits the submission in paper of a Form 6-K if submitted solely to provide an attached annual report to security holders.

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7): ____

Note: Regulation S-T Rule 101(b)(7) only permits the submission in paper of a Form 6-K if submitted to furnish a report or other document that the registrant foreign private issuer must furnish and make public under the laws of the jurisdiction in which the registrant is incorporated, domiciled or legally organized (the registrant's "home country"), or under the rules of the home country exchange on which the registrant's securities are traded, as long as the report or other document is not a press release, is not required to be and has not been distributed to the registrant's security holders, and, if discussing a material event, has already been the subject of a Form 6-K submission or other Commission filing on EDGAR.

Indicate by check mark whether by furnishing the information contained in this Form, the registrant is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes No

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): 82- _____

Signatures

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

FOR IMMEDIATE RELEASE: February 23, 2005

No. 2/05

IAMGOLD UPDATES 2004 OPERATING RESULTS AND YEAR-END 2004 RESERVES AND RESOURCES

Toronto, Ontario, February 23, 2005 - IAMGOLD Corporation ("IAMGOLD" or "the Company") announced today that the Company produced a total of 432,000 ounces of gold in 2004 at a weighted average GI cash cost of US\$248 per ounce. The Company's total share of gold reserves at the four mines in which it has its venture interests, as at June 30, 2004 (Tarkwa and Damang) and December 31, 2004 (Sadiola and Yatela), increased 11% year-over-year.

Joe Conway, President and CEO of IAMGOLD commented on the Company's 2004 production results and share of gold reserves and resources, stating: "Not unlike many of our peers in the industry, our costs have been impacted by increased fuel costs and fluctuating currency rates during 2004. A number of cost savings initiatives are being undertaken at the operations to attempt to lower operating costs going forward. IAMGOLD's share of reserves have increased year-over-year as a result of the addition of almost one million ounces of gold at Tarkwa. With the prefeasibility study on the Sadiola Deep resources in progress we anticipate an increase in reserves at Sadiola at year-end 2005."

2004 Production and Cash Costs

The table below summarizes production and GI cash costs at each of the four operations in which IAMGOLD holds its interests.

Mine	Production (000's oz)		IMG GI Cash Cost* (US\$/oz)
	100 %	IMG Share	
Sadiola	458	173	\$ 246
Yatela	242	97	\$ 263
Tarkwa	553	105	\$ 250
Damang	296	56	\$ 221
Total/Weighted Average		432	\$ 248

Gold Institute cash cost is a non-GAAP measure, calculated in accordance with the Gold Institute Standard wherein cash cost equals the sum of cash operating costs inclusive of production-based taxes and management fees and may include certain cash costs incurred in prior periods such as stockpiling and stripping costs and may exclude certain cash costs incurred in the current period that relate to future production. Refer to individual mining operating results sections for mine GI cash costs and reconciliations to GAAP.

Total forecast 2005 production from the four mines in which IAMGOLD holds its interests is 450,000 ounces at a GI cash cost of US\$270 per ounce.

Discussion on Reserves

IAMGOLD's share of combined total reserves from its Sadiola, Yatela, Tarkwa and Damang mines is 4.13 million ounces (refer to Table 1) using a gold price of US\$350 per ounce and based on pit optimizations run at US\$350 per ounce of gold, an 11% increase compared to year-end 2003.

Table 1
Summary Table of IAMGOLD's Reserves and Resources ⁽¹⁾

Mine	Proved and Probable Reserves		Measured and Indicated Resources		Inferred Resources	
	100 %	IMG's Share	100 %	IMG's Share	100 %	IMG's Share
	(000's oz)	(000's oz)	(000's oz)	(000's oz)	(000's oz)	(000's oz)
Sadiola ⁽²⁾⁽⁴⁾	2,190	832	3,454	1,312	4,982	1,893
Yatela ⁽²⁾⁽⁴⁾	886	354	1,242	497	249	100
Tarkwa ⁽³⁾⁽⁵⁾	14,730	2,784	17,935	3,390	2,225	421
Damang ⁽³⁾⁽⁵⁾	862	163	1,526	288	303	57
Total	18,668	4,133	24,157	5,487	7,759	2,471

(1) Measured and indicated resources include proved and probable reserves.

(2) Reserves calculated at a US\$350/oz gold price on pits optimized at a US\$350/oz gold price.

(3) Reserves taken from a US\$350/oz gold price sensitivity analysis on pits modeled at US\$375/oz gold.

(4) Mineral Resources calculated at a gold price of \$425/oz.

(5) Mineral Resources are at a gold price of US\$400/oz.

Total proved and probable reserves from June 30, 2003 to June 30, 2004 at Tarkwa (at a gold price of US\$350 per ounce and net of 550,000 ounces of production during the period), increased by 4.9 million ounces of which 926,000 ounces are to IAMGOLD's account. At Damang proved and probable reserves decreased by 57,000 ounces during this same period (assuming a similar gold price and net of 308,000 ounces of production during the period), of which 11,000 ounces were to IAMGOLD's account. For more detail on Tarkwa and Damang reserves and resources please refer to the press release of October 4, 2004.

Tables 2 through 5 illustrate proved and probable reserves and measured, indicated and inferred resources for both Sadiola and Yatela at December 31, 2003 and at December 31, 2004 at a US\$325 per ounce and a US\$350 per ounce gold price, respectively.

The decline in proved and probable reserves from December 31, 2003 to December 31, 2004 at the **Sadiola** mine totaled 201,000 ounces to IAMGOLD's account while at the **Yatela**, proved and probable reserves during this same period declined by 93,000 ounces to IAMGOLD's account. This compares to IAMGOLD's share of material delivered to the Sadiola plant and the Yatela heaps of 234,000 ounces and 127,000 ounces of gold, respectively during the 12 month period ended December 31, 2004 (refer to Table 3). Looking ahead, IAMGOLD anticipates a significant portion of the material currently classified as resources at Sadiola to be converted into reserves once the prefeasibility study is completed on the Sadiola Deep project.

Table 2

Proved and Probable Reserves - Sadiola and Yatela Mines

	December 31, 2004 ⁽¹⁾				December 31, 2003 ⁽⁵⁾			
	Tonnes	Grade	Contained Gold		Tonnes	Grade	Contained Gold	
			100 %	IMG Share			100 %	IMG Share
	(Mt)	(gpt)	(000's oz)	(000's oz)	(Mt)	(gp)t	(000's oz)	(000's oz)
Sadiola ^{(2) (3) (6) (7) (8)}								
Proved	6.6	1.8	379	144	6.5	1.9	404	154
Probable	15.8	3.5	1,811	688	20.4	3.5	2,314	879
Total	22.4	3.0	2,190	832	26.9	3.1	2,718	1,033
Yatela ⁽⁴⁾								
Proved	2.0	1.9	119	48	2.3	1.1	83	33
Probable	5.7	4.2	766	306	8.4	3.8	1,034	414
Total	7.7	3.6	886	354	10.7	3.3	1,117	447

(1) Using the J.O.R.C. Code. Pit optimized and designed at US\$350/oz gold price cut-off with pit content on US\$350/oz cut-off grade.

(2) Plant recovery is assumed to be 95% for oxides and 79% for sulphides.

(3) All the reserves in the "Proved" category are stockpile material. All the reserves classified as "Probable" are in-pit.

(4) Recovery is assumed to be 85% for oxides and 75% for sulphides.

(5) Using the J.O.R.C. Code Pit optimized and designed at US\$325/oz.

(6) Cut-off grades calculated for Plant Grade Ore [0.96g/t (oxide), 1.36g/t(sulphide)], Upper Marginal Ore [0.85g/t (oxide), 1.23g/t (sulphide)] and Lower Marginal Ore [0.5g/t (oxide), 0.78 g/t (sulphide)].

(7) No grade control reconciliation factor has been applied to the 2004 reserves but a +3% factor was applied to the grade of oxide ore from the Sadiola pit for the purpose of Life-of-Mine planning.

(8) 2003 plant recovery was assumed to be 95% for oxides and 82% for sulphides.

Table 3 illustrates the change in reserves at the Sadiola and Yatela mines as a result of the depletion due to production plus contributions due to the change in the gold price, pit design, geological models, etc. (refer to accompanying notes), during the 12 month period to December 31, 2004.

Table 3

Reconciliation of Proved and Probable Reserves - Sadiola and Yatela Mines

	Sadiola Contained Gold		Yatela Contained Gold	
	100 %	IMG Share	100 %	IMG Share
	(000's oz)	(000's oz)	(000's oz)	(000's oz)
Reserves at Dec. 31/03 (at US\$325 per ounce)	2,718	1,033	1,117	447
Depletion due to mining (Dec./02 - Dec./03) ⁽¹⁾	616	234	317	127
Additions ⁽²⁾	-	-	32	13
Other ^{(3) (4)}	88	33	54	21
Reserves at Dec. 31/04 (at US\$350 per ounce)	2,190	832	886	354

(1) Depletion due to mining during the 12 month period to December 31, 2004 does not necessarily total actual reported production for the period due to amounts calculated to have been processed from the reserve model versus actual production.

(2) Addition due to model changes - inferred to indicated.

(3) Addition due to changes in Sadiola pit design, grade control gains.

(4) Addition due to change to Yatela Pit design.

The sensitivity on proved and probable reserves for Sadiola and Yatela at various gold price assumptions is shown in Table 4. The sensitivity in ounces of gold at varying gold prices is minimal. At Sadiola this is primarily a function of the fact that below pit resources are contained within resource material currently undergoing a prefeasibility study as part of the Sadiola Deep project. As such only material existing lateral to the pit at various gold prices would be included in this sensitivity analysis and these are of limited extent.

Table 4

Proved and Probable Reserve Sensitivity - Sadiola and Yatela Mines

Gold Price	Sadiola Gold Mine				Yatela Gold Mine			
	Tonnes		Contained Gold		Tonnes		Contained Gold	
	Grade	100 %	IMG Share	Grade	100 %	IMG Share		
	(Mt)	(g/t)	(000's oz)	(000's oz)	(millions)	(g/t)	(000's oz)	(000's oz)
US\$ 300/oz	22.4	3.0	2,190	832	7.7	3.6	886	354
US\$ 400/oz	27.3	2.9	2,543	966	7.9	3.6	909	364

Discussion on Resources

As at December 31, 2004, IAMGOLD's share of measured and indicated resources (which include reserves) at Sadiola totaled 1.3 million ounces of gold and at Yatela, including the Alamoutala deposit, totaled 496,000 ounces. This represents a total increase of 38,000 ounces at Sadiola and Yatela compared to measured and indicated resources reported at December 31, 2002. Most of this reduction occurred at the Yatela mine where resources were reduced by 70,000 ounces while measured and indicated resources increased by 108,000 ounces due to additions of material from the Sadiola Deep area. As at December 31, 2003, IAMGOLD's share of inferred resources at Sadiola and Yatela were 2.0 million ounces. This represents a total reduction of 1.2 million ounces compared to inferred resources reported at December 31, 2003. Most of this reduction occurred as a result of infill drilling at the Sadiola Deep Sulphide project below a new US\$400 per ounce pit shell. Resource modeling at Sadiola Deep was based on phase 6 drilling. Since the completion of phase 6 drilling at Sadiola Deep, an additional approximate 45,000 metres of infill drilling has been completed in the phase 7 program. Phase 7 infill drilling will be included in the prefeasibility study on the Sadiola Deep project, expected to be completed early in the second half of 2005.

Table 5

Inferred	0.3	2.3	20	8	0.9	1.9	56	22

(1) Measured and indicated resources include proved and probable reserves.

(2) A cut-off of 1.0 g/t gold was used within a US\$425/oz pit shell, unless otherwise noted.

(3) Measured resources include stockpiles (oxide), saprolite & oxide, silicious oxide, soft sulphide, blast oxide, blast sulphide, sulphide stockpile above a cut-off of 1.0 g/t gold.

(4) A US\$425/oz pit and cut-off grades of 0.6 g/t and 1.0 g/t were used for the Yatela main pit and Alamoutala pit, respectively.

(5) Measured resources include stockpiles at a cut-off of 0.4 and 0.7 g/t.

(6) The inferred resources for the satellite deposits are from FE-2, FN-3, FE-3, FE-4, Sekokoto and Tambali South and were calculated at a cut-off grade of 1.0 g/t with no limiting shell.

Qualified Person / Quality Control Notes

For 2003, the Competent Person responsible for the generation of the mineral resource and reserve statements for the Sadiola and Yatela Mines include Sadiola and Yatela mine geologists G. Cooper, T. Gell M.A. Thiel, E.J. Smuts, R. van der Westhuizen and S. Bamforth. Reserves and resources calculated by the mine staff underwent an audit by Competent Persons at AngloGold, including V. Chamberlain and D. Worrall.

For 2002, in the case of Sadiola and Yatela, mine staff calculated the 2002 resources and reserves and AngloGold personnel audited the figures. The Competent Persons involved were M.A. Thiel, E.J. Smuts, R. van der Westhuizen, T. Gell, C. Marshall, B. Parsons, V. Chamberlain and D. Worrall. For Tarkwa and Damang, the reserve and resource figures were prepared by Gold Fields Ltd and the Competent Person who supervised the work is G.S.G. Chapman (refer to press release of September 23, 2003).

-

IAMGOLD Corporation is a growth oriented, mid tier gold mining, exploration and development company. Its head office is located in Toronto, Canada. IAMGOLD generates operating cash flow from its interests in four gold mines and numerous revenue generating royalty interests and holds about \$100 million in cash and gold bullion on its balance sheet. Principal assets include a 38% interest in the Sadiola gold mine and 40% interest in the Yatela gold mine, located in Mali, West Africa and 18.9% interests in both the Tarkwa and Damang gold mines, located in Ghana, West Africa. The Company's attributable share of forecasted 2005 gold production is 440,000 ounces. IAMGOLD also has a portfolio of royalty interests in a number of producing gold mines and a 1% royalty interest in the rich Diavik diamond mine in northern Canada. The Company is also exploring highly prospective ground in West Africa and South America.
